

ABSTRACT OF THE DISCLOSURE

5 A transmitting apparatus for transmitting a  
hierarchical structure of a directory for  
hierarchically managing locations of contents data is  
disclosed, that comprises a managing means for managing  
a hierarchical structure of a directory composed of a  
container entry and a leaf entry, a container entry  
containing information in the immediately lower  
hierarchical level thereof, a leaf entry being disposed  
10 in the immediately lower hierarchical level of a  
container entry, a leaf entry not containing  
information in the immediately lower hierarchical level  
thereof, a detecting means for detecting a change of  
the hierarchical structure of the directory managed by  
the managing means and obtaining first difference  
15 information and second difference information  
corresponding to the detected result, the first  
difference information being the difference of  
container entries corresponding to the detected result,  
20 the second difference information being the difference  
of leaf entries, and a transmitting means for  
separately transmitting the first difference  
information and the second difference information.
